Preparation
Check the mesh and the flow angles against the sector
restore0Dir: 0.orig/ → 0/
initFrom?
yes
no
mapFields + changeDictionary; stop if a log has no End
Binding: rankfile, one process per core
decomposePar -force
Run and record
Start the measurement: machineLog.py, perf -a
perf stat → time → mpirun --bind-to core solver
Stop the measurement (also on exit, by trap)
reconstructPar -latestTime
Append run_<date> to run.info
Compress the logs, remove processor*, notify
